

mysqldump segmentation fault (core dumped)

```
[root@localhost ~]# mysqldump --single-transaction -u root -pmysteel --all-databases > backup.sql
```

Segmentation fault (core dumped)

原因：

```
[root@localhost ~]# find / -name mysqldump
```

```
/usr/bin/mysqldump
```

```
/usr/local/mysql/bin/mysqldump
```

```
[root@localhost ~]#
```

```
[root@localhost ~]# which mysqldump
```

```
/usr/bin/mysqldump
```

```
[root@localhost ~]#
```

解决方法：写绝对路径

```
[root@localhost ~]# /usr/local/mysql/bin/mysqldump --single-transaction -u root -pmysteel --all-databases > backup.sql
```

mysqldump: [Warning] Using a password on the command line interface can be insecure.

mysqldump: Couldn't execute 'SAVEPOINT sp': The MySQL server is running with the --transaction-write-set-extraction!=OFF option so it cannot execute this statement (1290)

```
[root@localhost ~]#
```

原因：变量 transaction-write-set-extraction 设置得不对。

解决方法：

```
set global transaction_write_set_extraction=off;
```
