mysqldump 全库导出

```
1. 全库导出:
mysqldump -u root -ppasswd --all-databases > all.sql
2. 导出多库:
mysqldump -u root -ppasswd -ddatabases db1 db2 > db12.sql
3. 导出单库:
mysqldump -u root -ppasswd db1 > db1.sql
4. 导出单库多表:
mysqldump -u root -ppasswd --databases db1 --tables table1 table2 > tb1tb2.sql
5. 导出单库单表符合条件的数据:
mysqldump -u root -ppasswd --databases dbl --tables tablel --where='id=1' > dlt1w1.sql
6. 只导出表结构:
mysqldump -u root -ppasswd --no-data --databases db1 > db1.sql
7. 跨服务器导出数据:
\verb|mysqldump -u root -ppasswd --host=h1 --databases | db1 | \verb|mysql --host=h2 -u root -p passwd | db2 | db2
8. 只导出表数据:
mysqldump -u root -ppasswd -t --databases db1 --tables table1 table2 > tb1tb2.sql
mysqldump -u root -ppasswd --no-create-info --databases db1 --tables table1 table2 > tb1tb2.sql
{\tt mysqldump \ -u \ root \ -pRoot@911 \ --no-create-info \ --databases \ wift\_pa \ --tables \ biz\_gl\_interface \ cux\_gl\_interface \ cux\_gl\_inter
